

**Fleximodo CityPortal App**

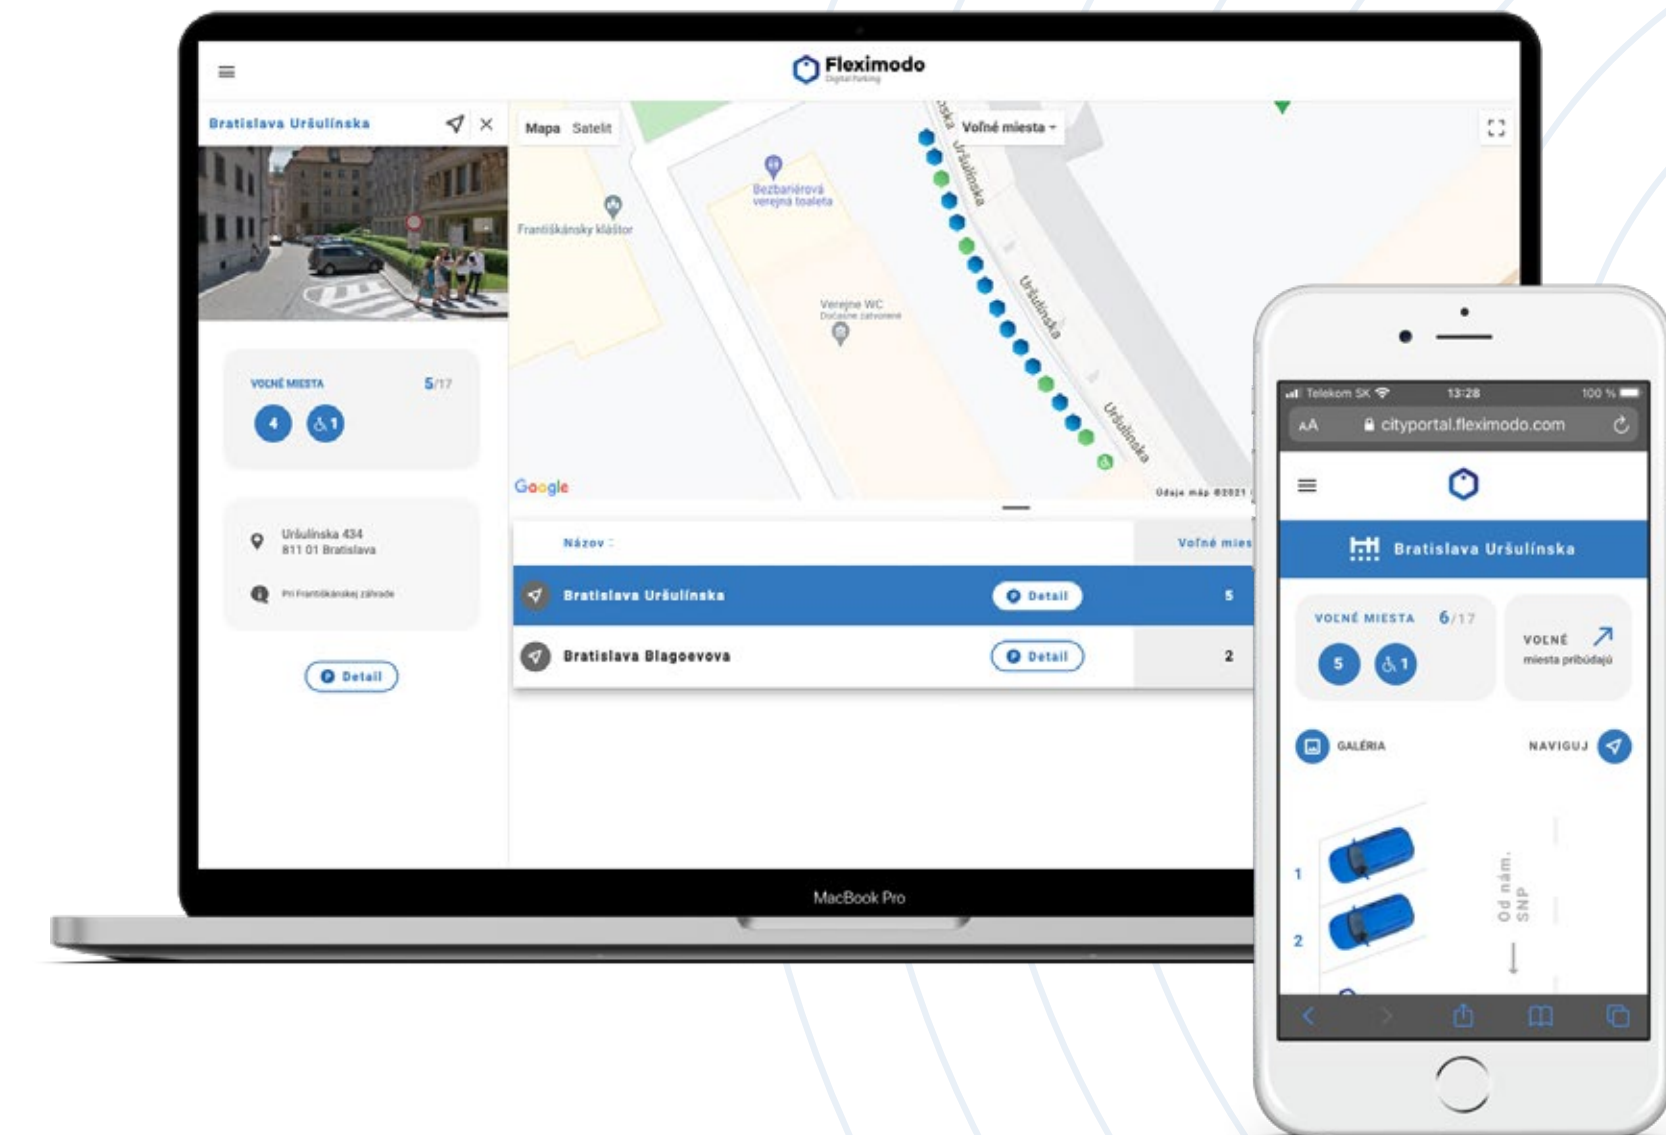

# Summary

Fleximodo CityPortal is a **web-based responsive app** divided into 2 parts to serve 3 types of users - a public part for “**Drivers**” and a private part for city authorities (“**Mayor**”) and parking enforcement officers (“**Enforcement officer**”). The dynamic information they provide is based on the data provided by IoT Parking Sensors and IoT Permit Cards.

**The Navigation** functionality is accessible to all users to visualize the parking situation in real-time for a given parking area equipped with parking sensors. The app enables the use of a smartphone to navigate towards the chosen parking area.

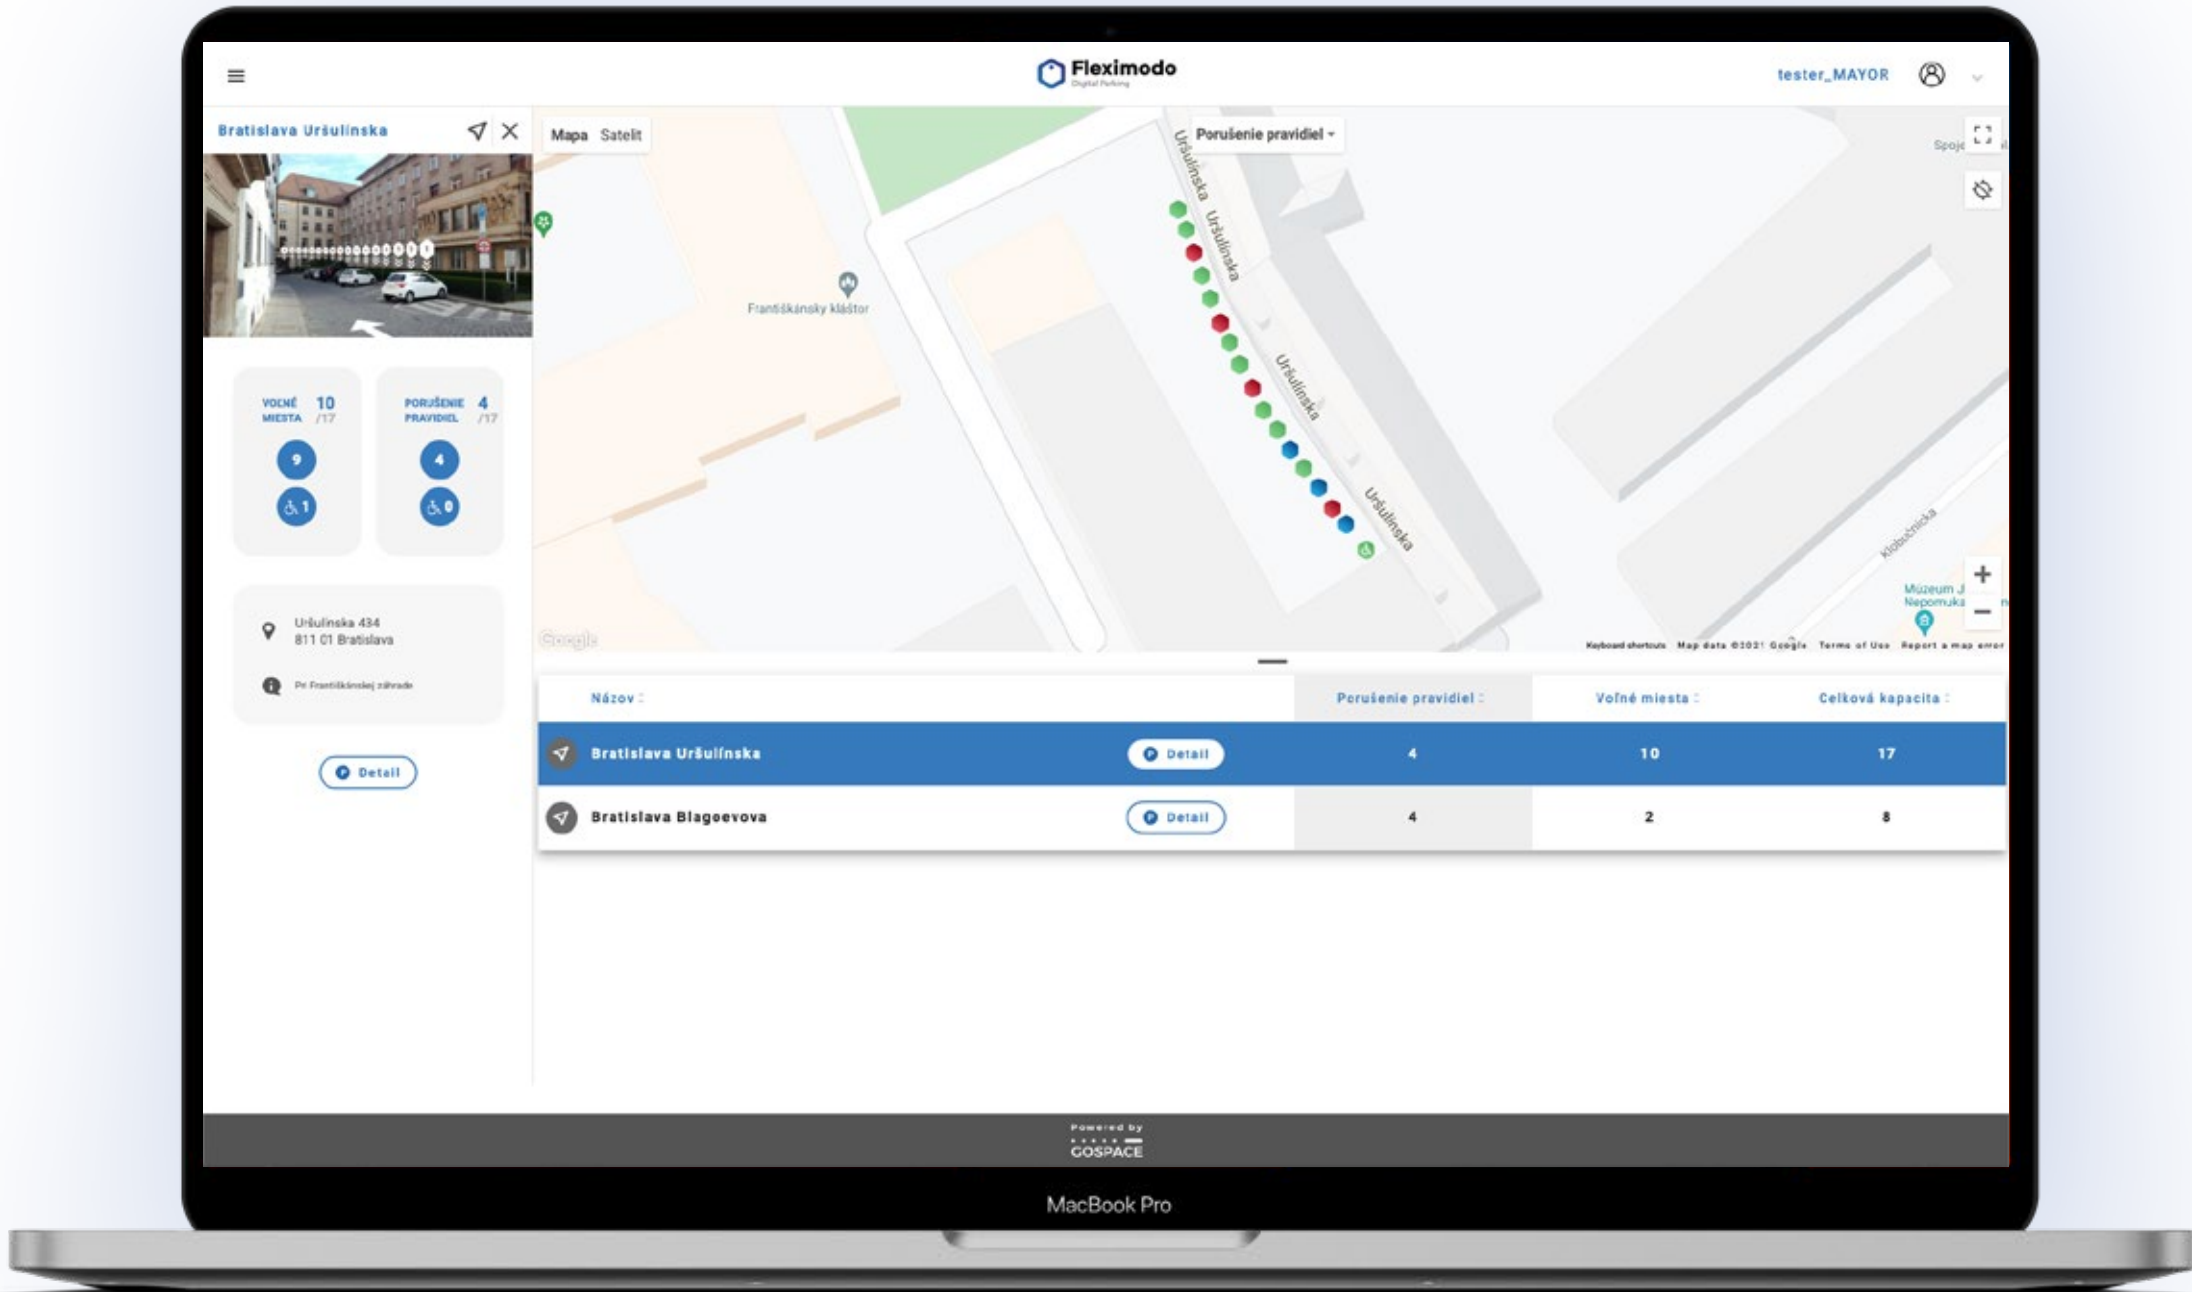

The private part of CityPortal is a management tool for city authorities to **define** and enforce **parking policy** in their city. Every parking slot can have a specific parking rule defined and applied. All parking rule violations are detected by the sensor in the ‘CityPortal’ and parking enforcement officers are **notified** (e-mail/SMS) and can choose to act upon a violation. Other functionalities include access to parking **statistics**, parking **reports**, and parking **reservations**.

# Features of CityPortal

- 🏠 Navigation for public
- 🏠 Parking policy setting
- 🏠 Notification about violation (e-mail/SMS)
- 🏠 Statistics
- 🏠 Reports

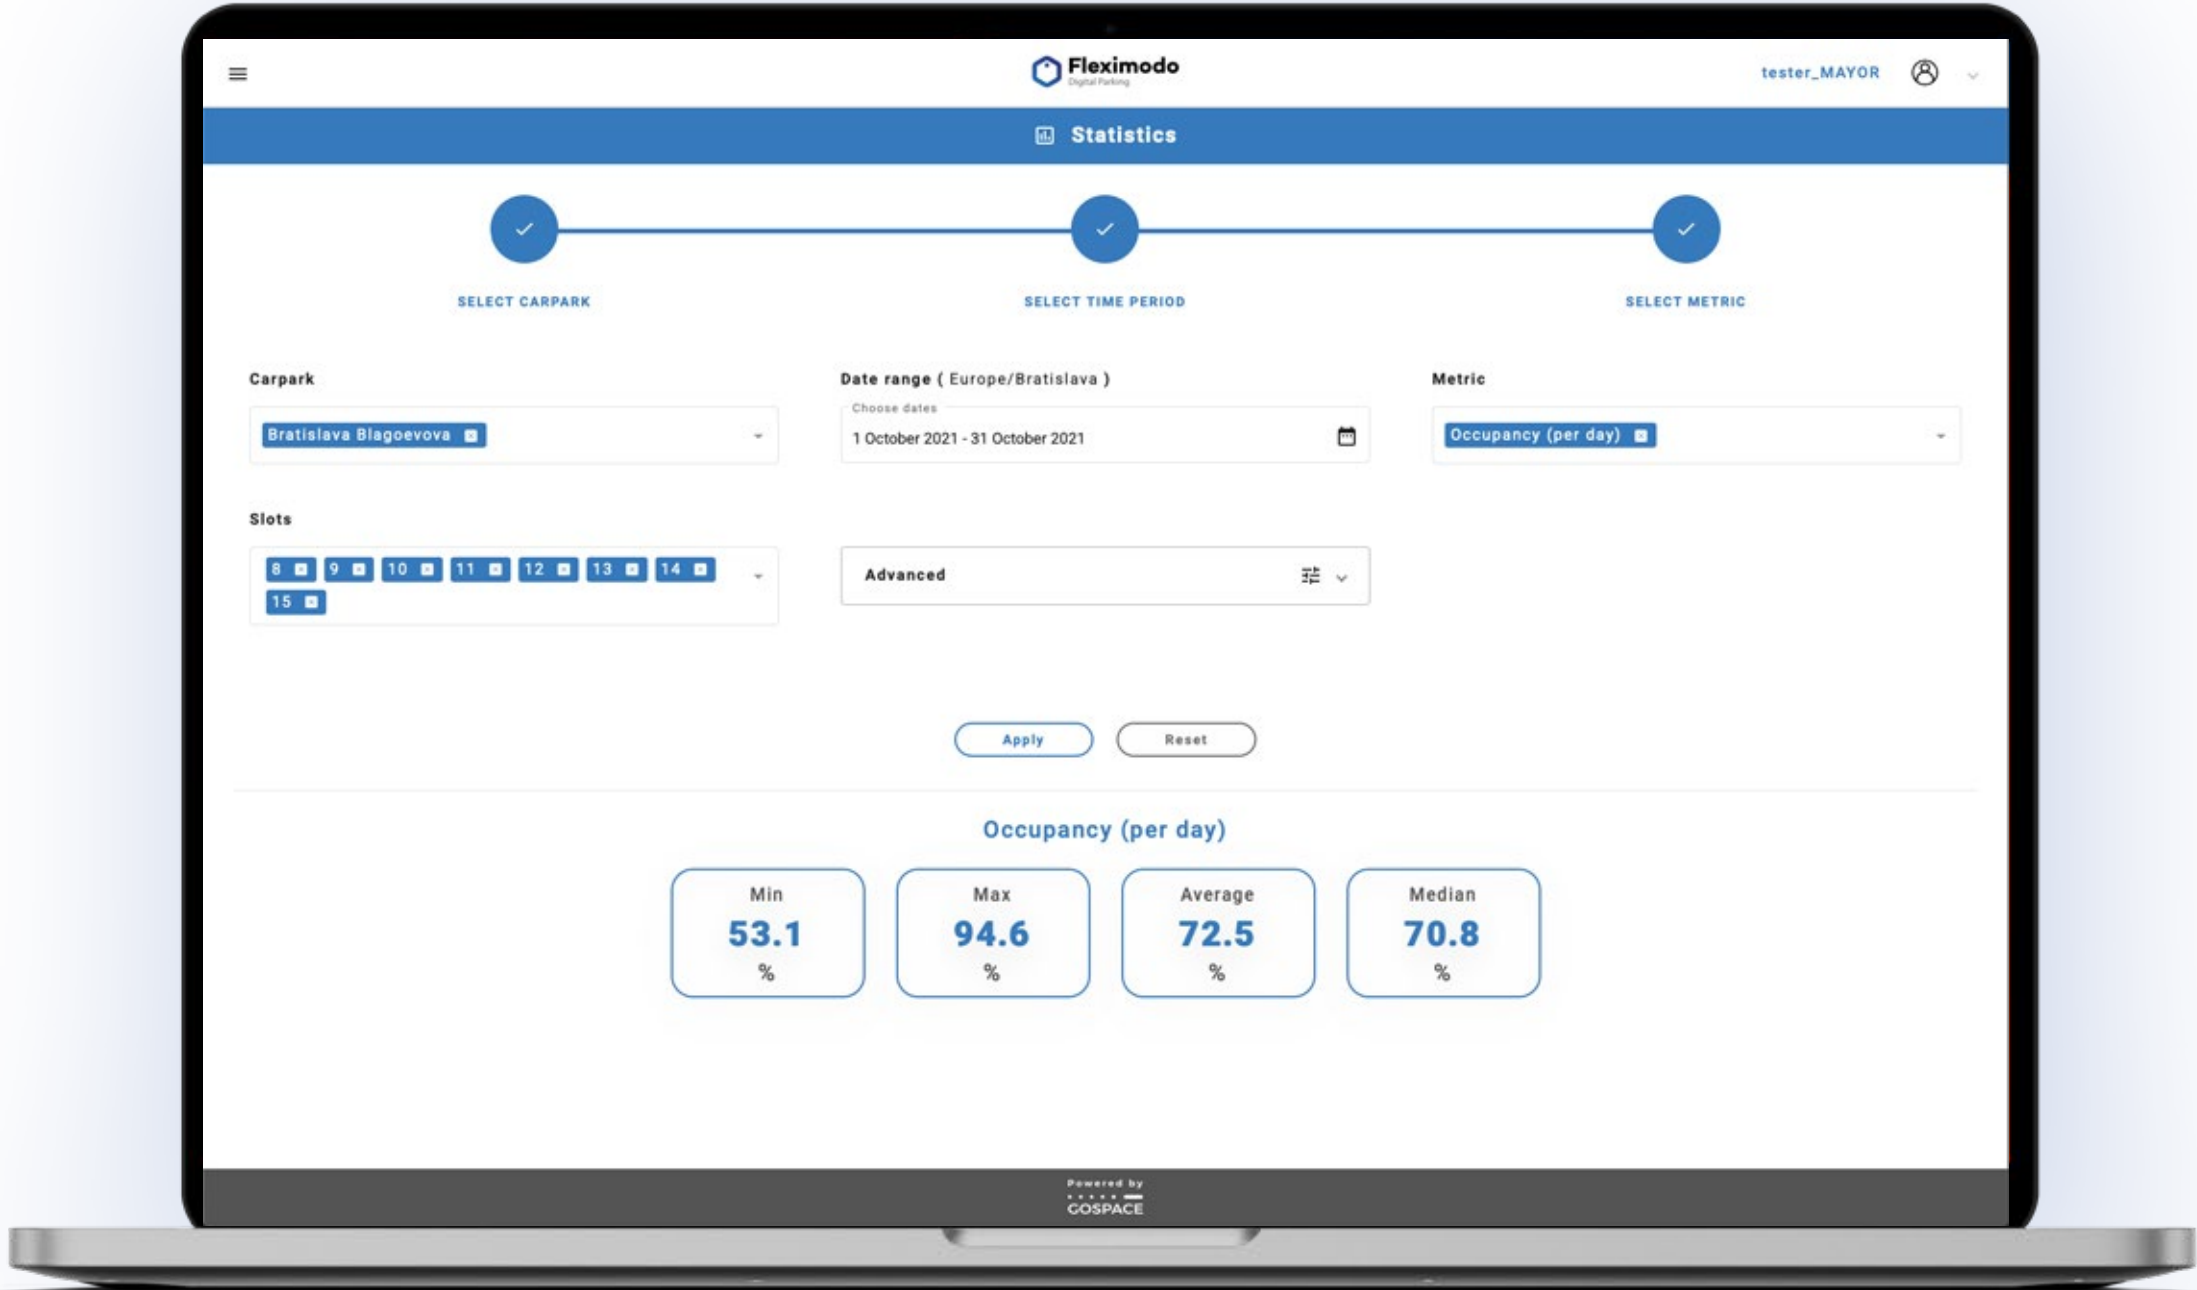

# Visualise parking areas in real-time

The Navigation and CityPortal apps enable the user to **visualise** the situation in **real-time** within the parking area. **Drivers** can easily **navigate** towards the **empty spots**. **Enforcement officers** have quick and precise information about where and when **parking offenses** were committed.

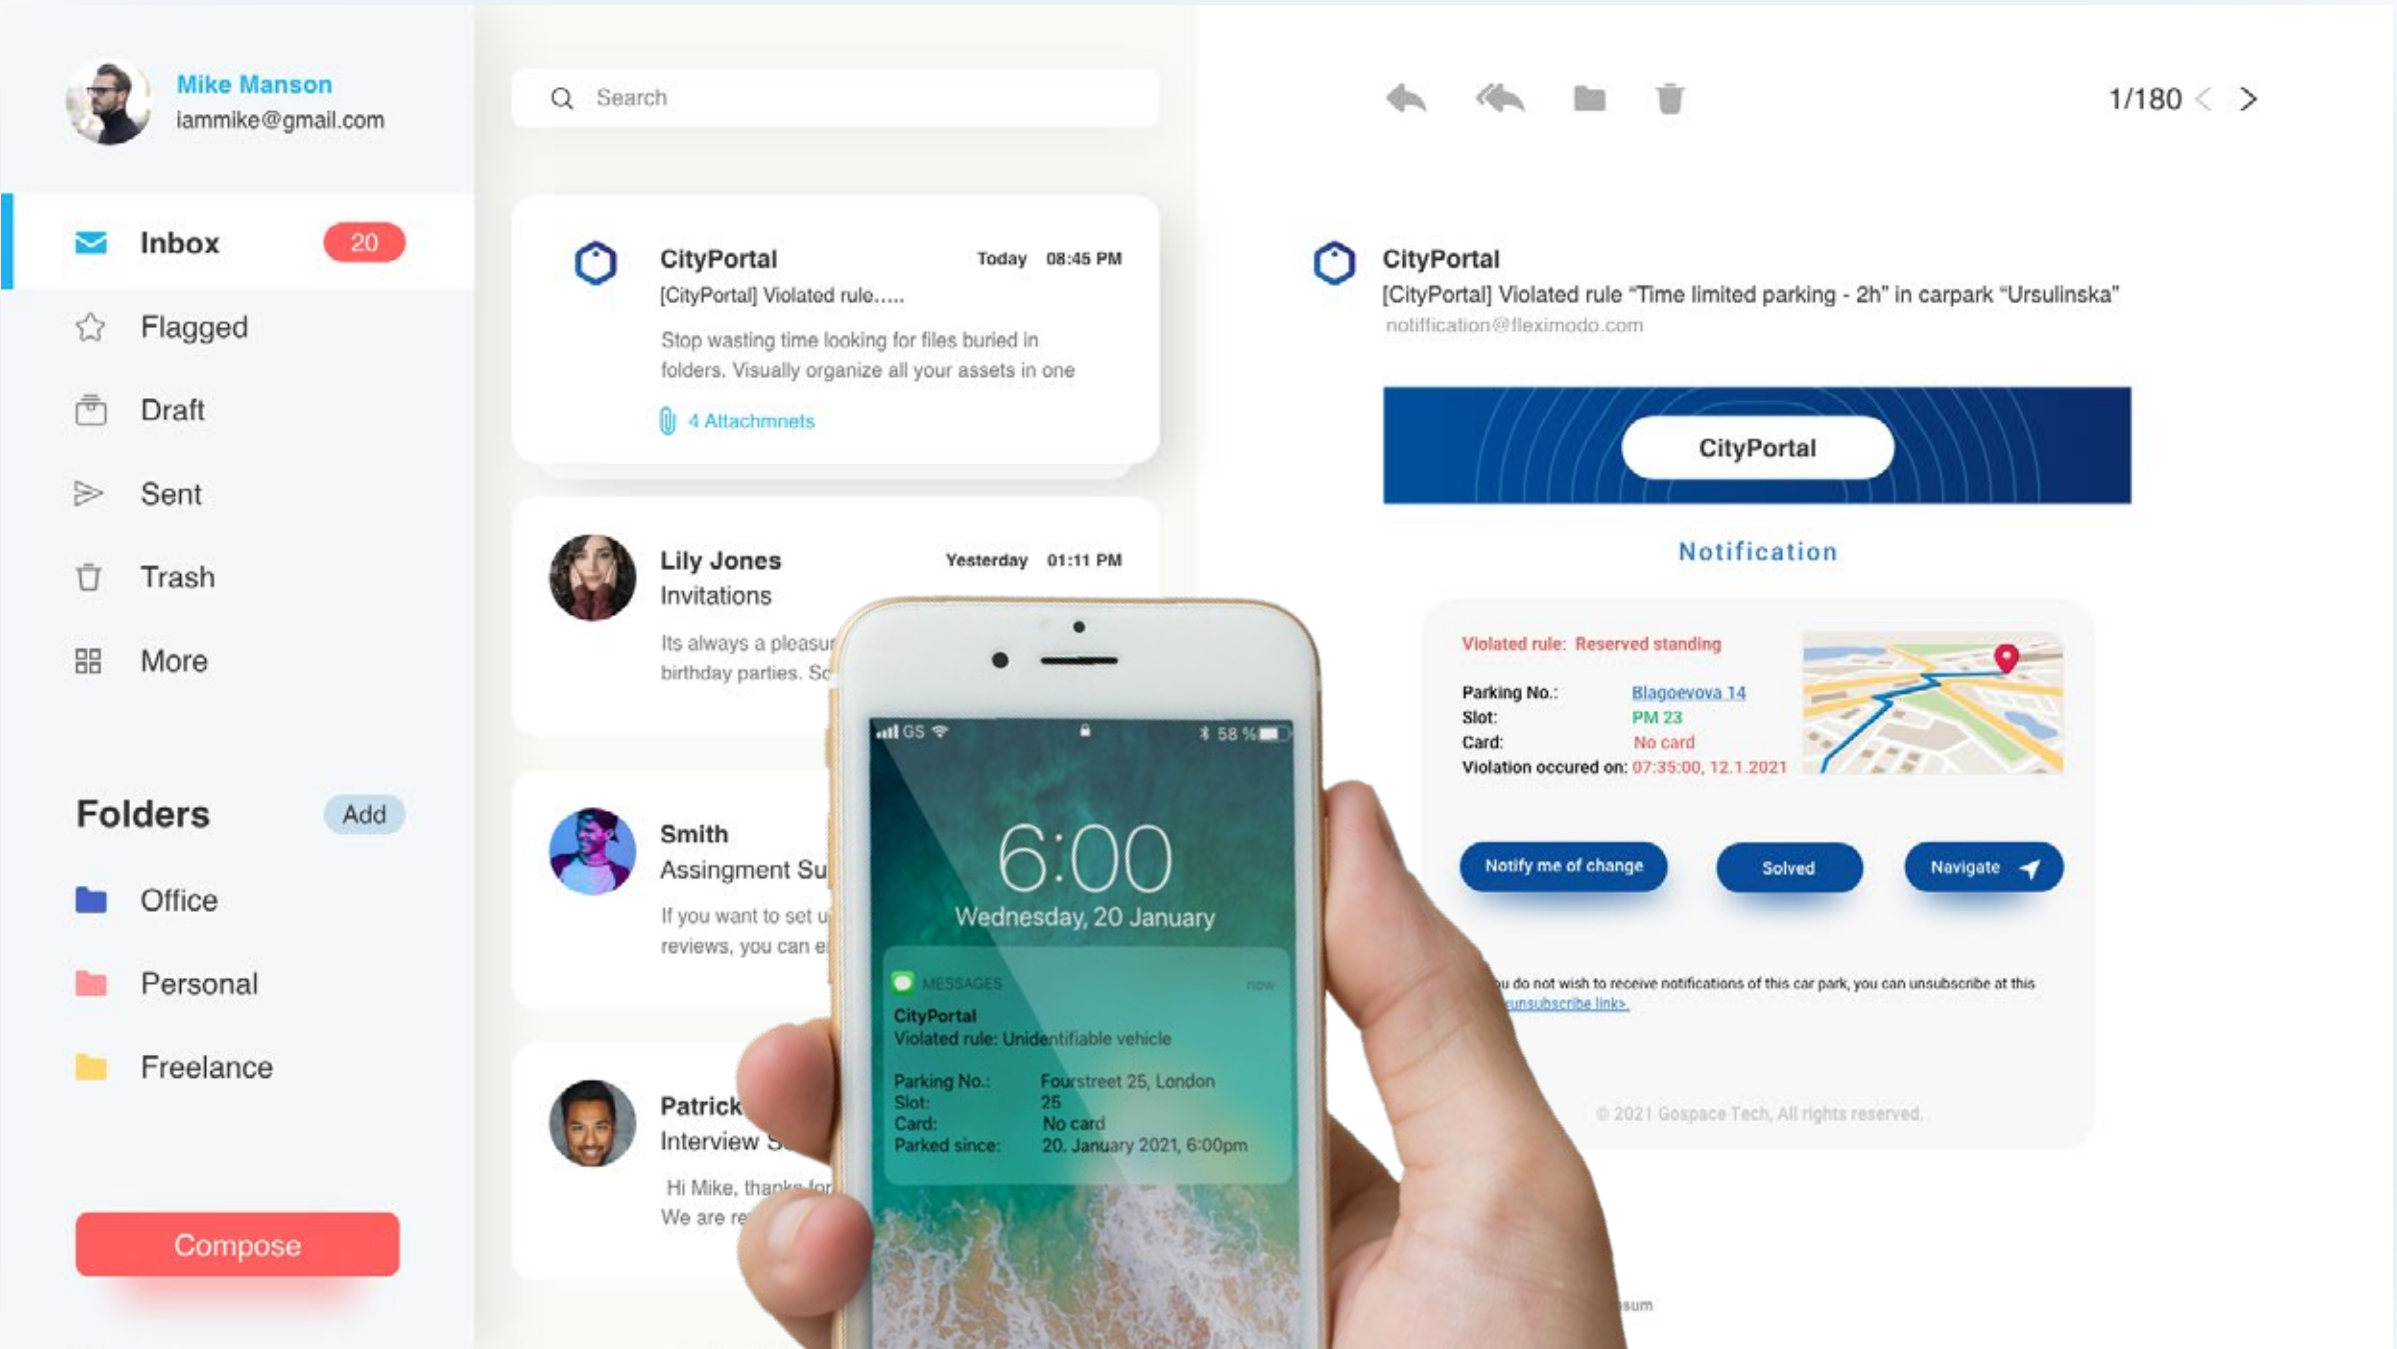

# Clear statistics to power your analytics

The CityPortal app also enables visualization of **statistic reports**, including **graphs** for management needs, and the ability to **download all data** for further analysis.

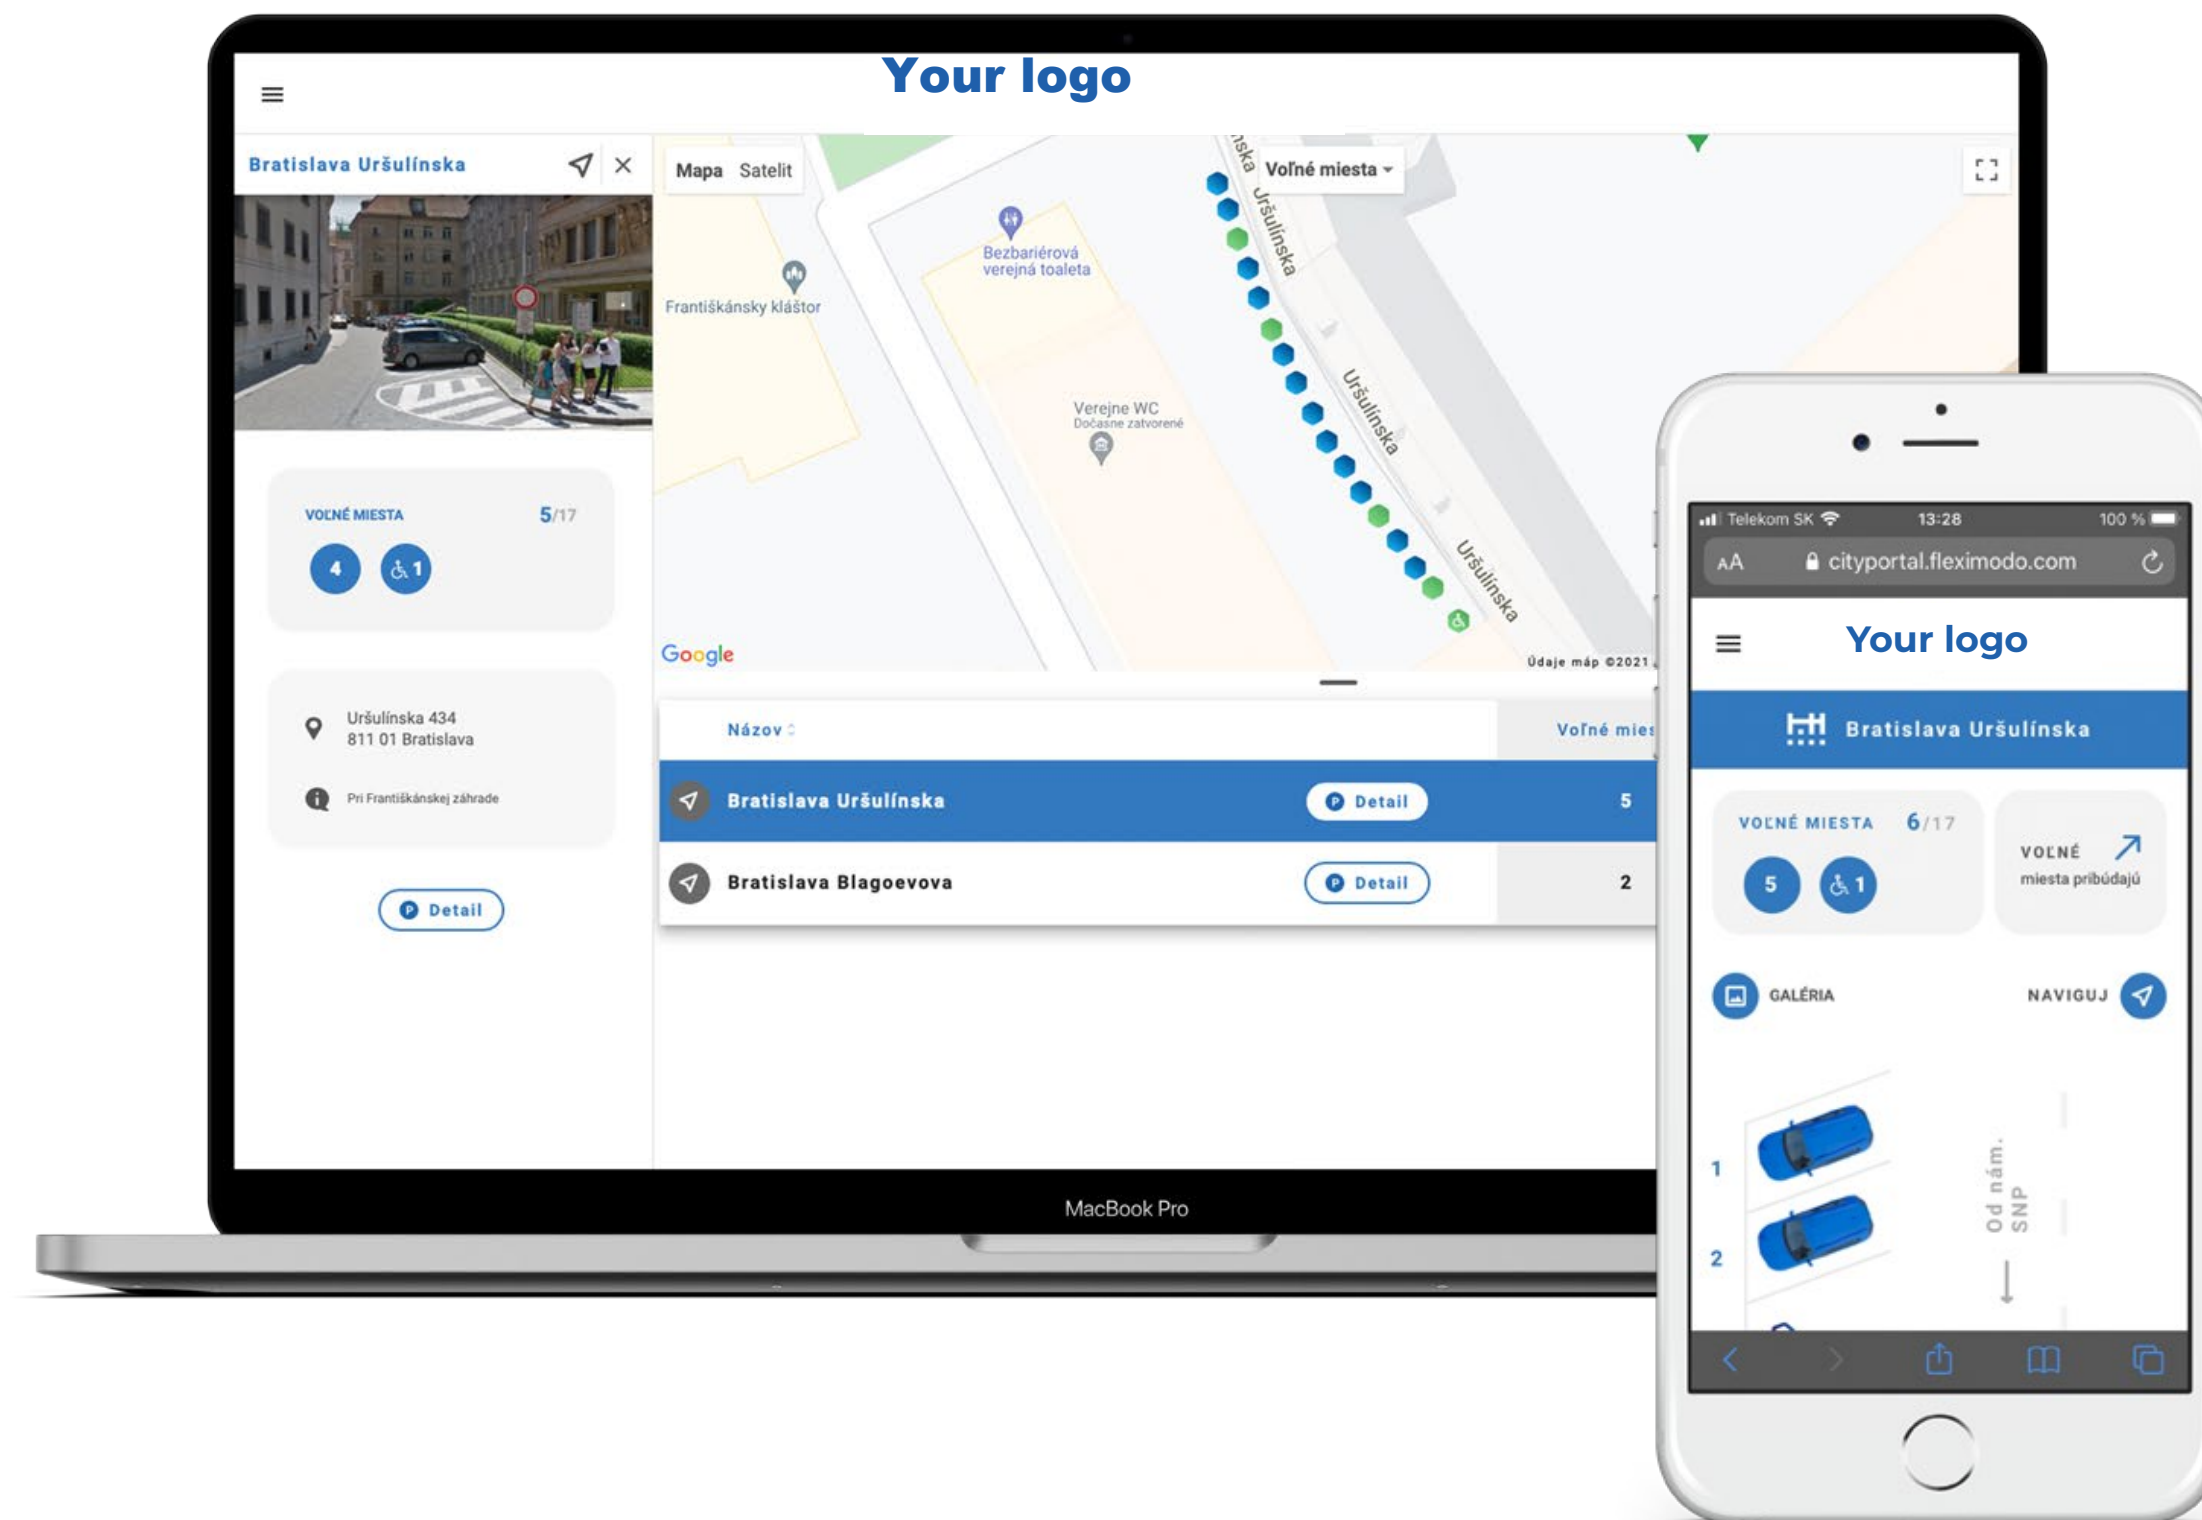

# Receive notifications

The CityPortal App also enables the enforcement officers to receive **real-time notifications** about parking rules violations (according to the local parking policy rules) **via email or SMS**. This increases both the efficiency of the enforcement officers and also the overall **parking payment compliance, increasing parking revenues**.

# White-labeling possible

The CityPortal App is normally operated under the “Fleximodo - Digital Parking” brand. However, **customers desiring white-labelling of CityPortal can have their logo added to both the desktop and mobile applications.**

**The web address can also be customized** to appear under operation of the partner's or customer's web domain if needed.
